

MERN Project : Car Rental Service Application

Lecture 1: Introduction to the Project

Agenda

01

**Understand All
the Phases of
Full Stack
Development**

02

**Understand
How to Create
hlds and llds**

03

**Work with
Teams and
Understand
Collaboration
Through GIT**

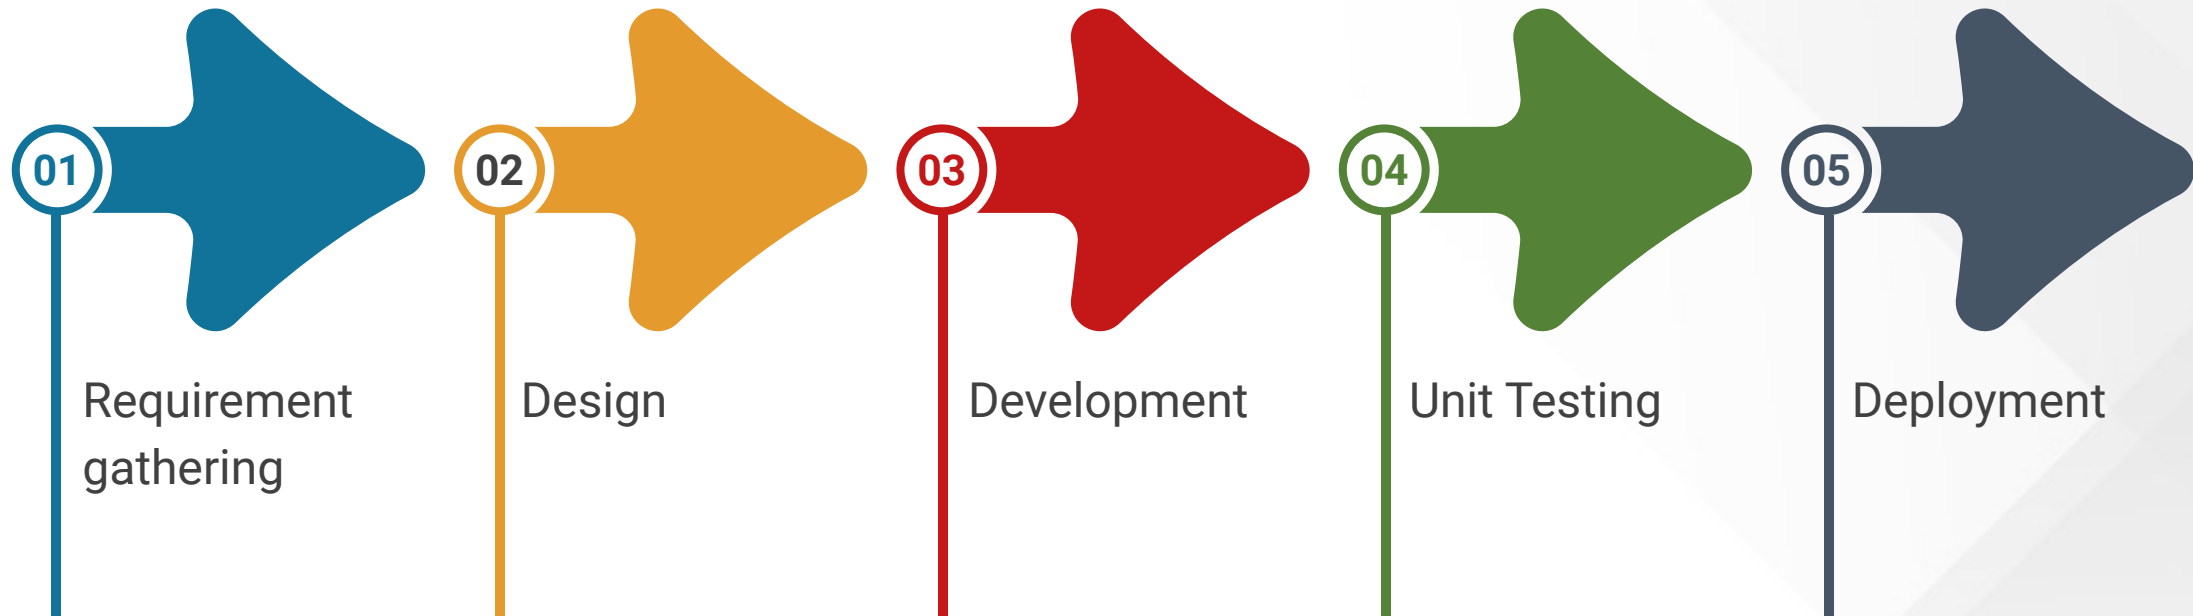

04

**Create and
Deploy a
Complete Full
Stack
Application**

Understand all the Phases of Full Stack Development

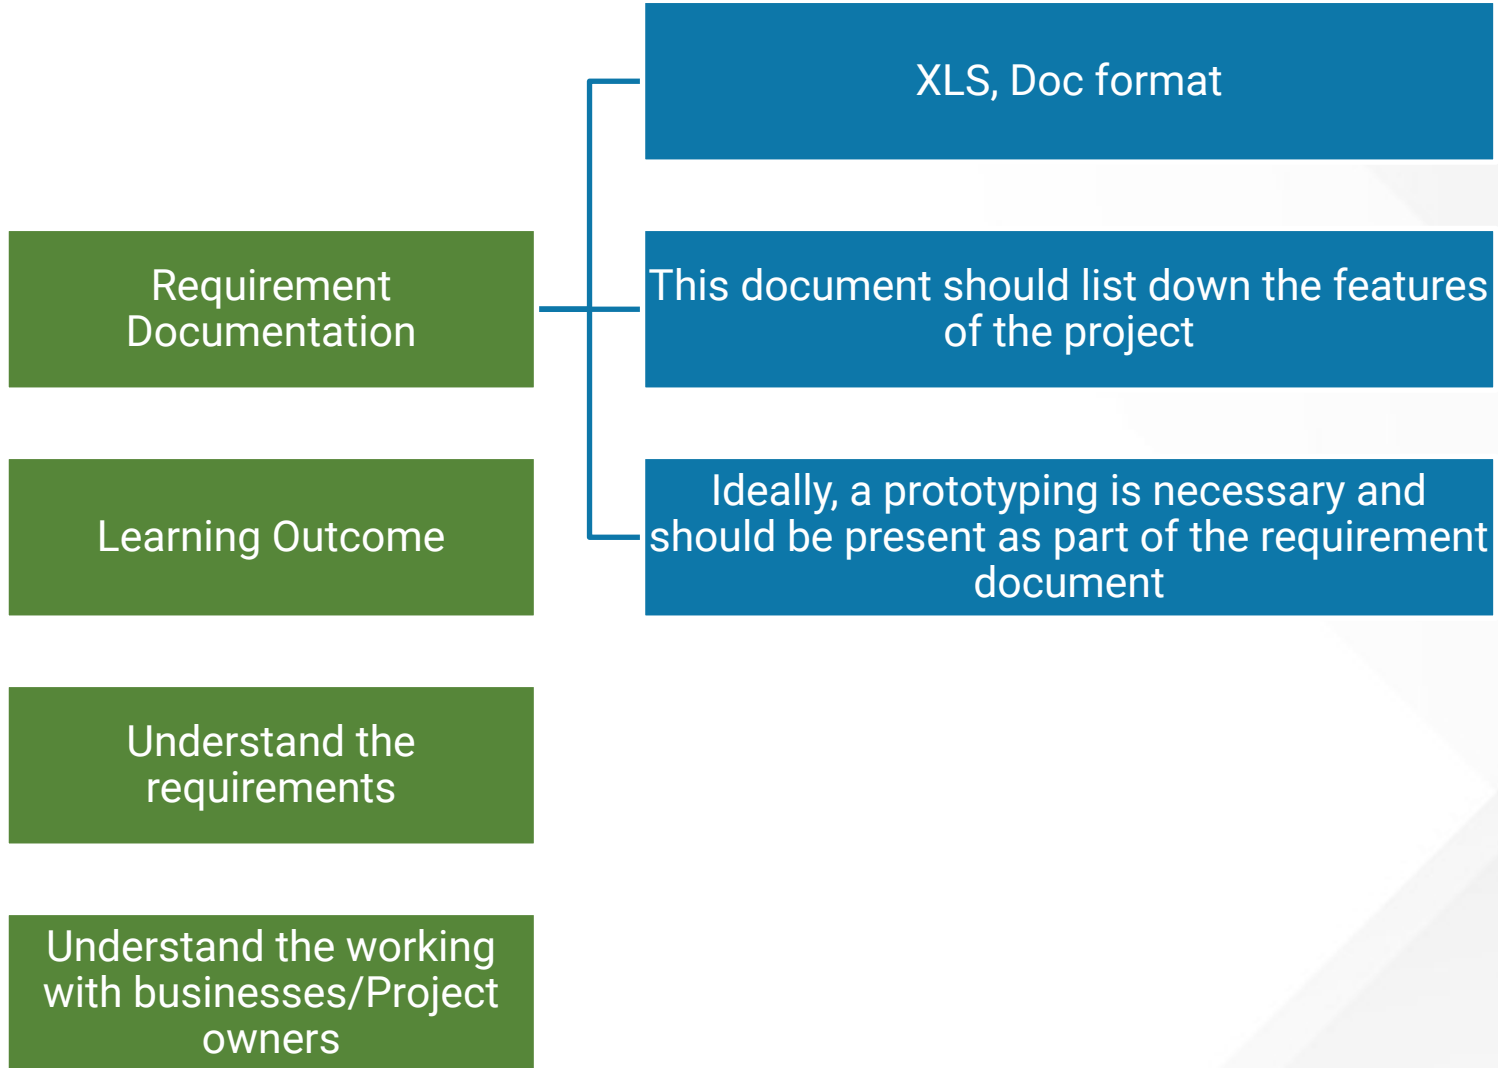

Phases of Full Stack Development

Requirement Gathering

Deliverables:

Requirement Gathering

SRS Document: Software Requirement Specification

A software requirement specification document contains **information regarding the functionality** of the application.

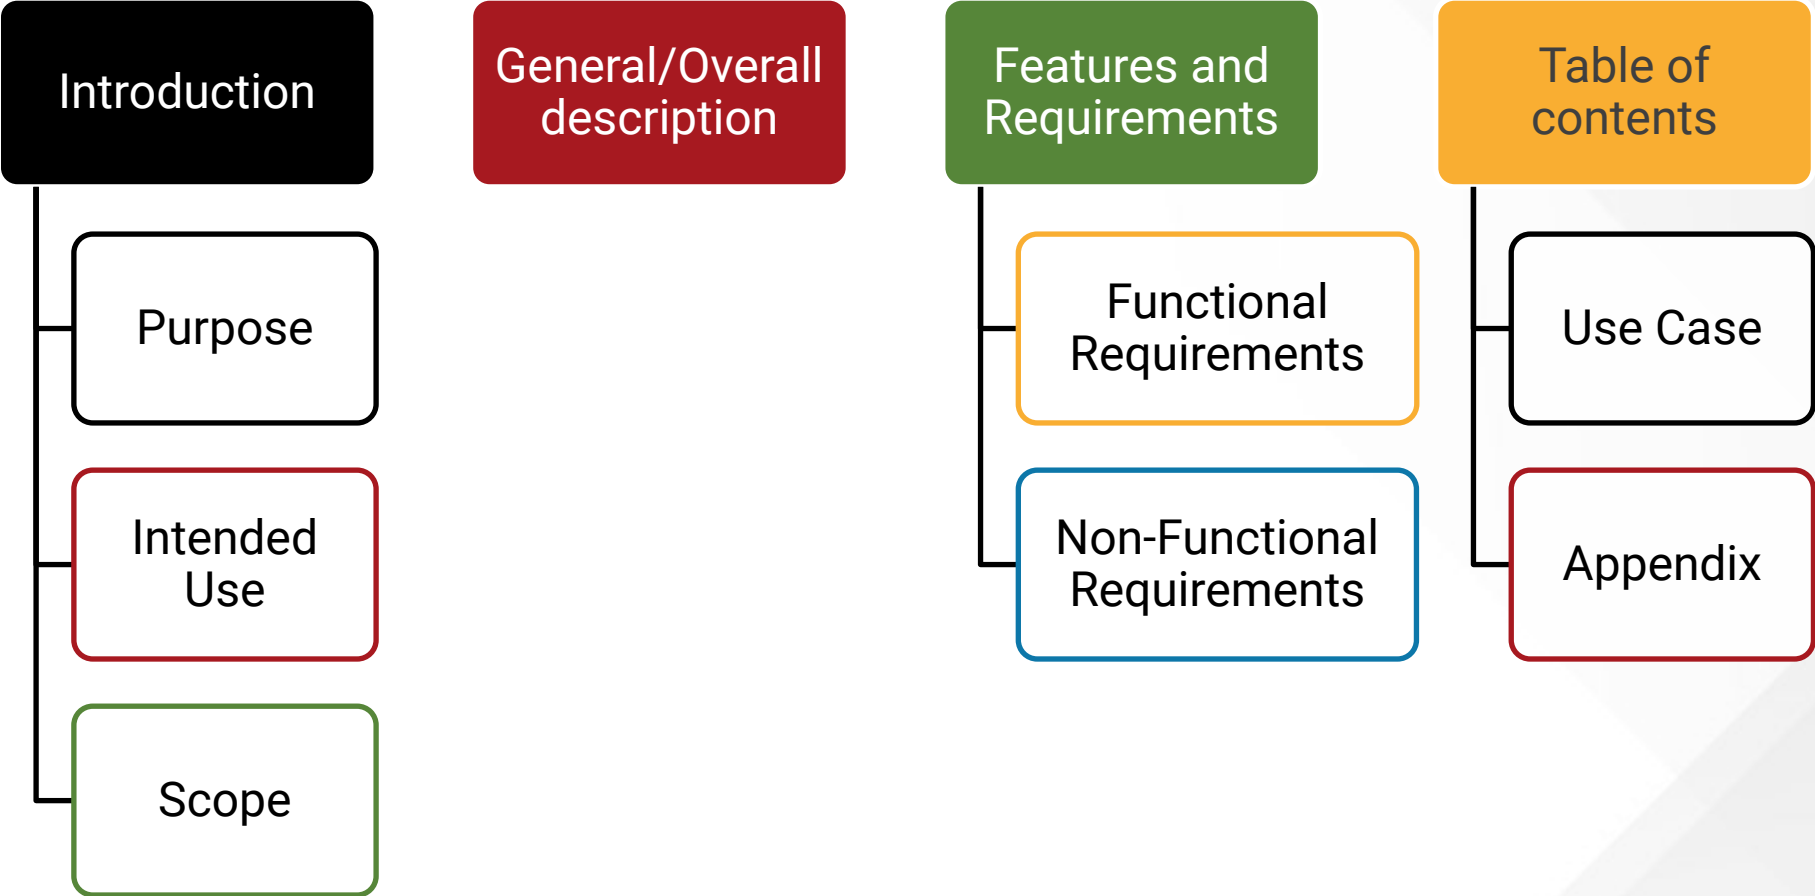

It describes what **tasks/operations** the application will perform.

It contains **functional as well as non functional** requirements along with use case model.

Requirement Gathering

Software Requirement Specification: Table of contents

Design

This is the most important phase of the development lifecycle.

Deliverables:

- **High level** Design Document
- **Low level** Design Document
- **User flow** Diagram
- Database Design
- System Design
- Test Plans

Learning Outcome:

- Understand **design process**
- Implement **problem solving** approaches
- Implement **Data structure and algorithms**
- Understand database designs and the decision-making process in database designs

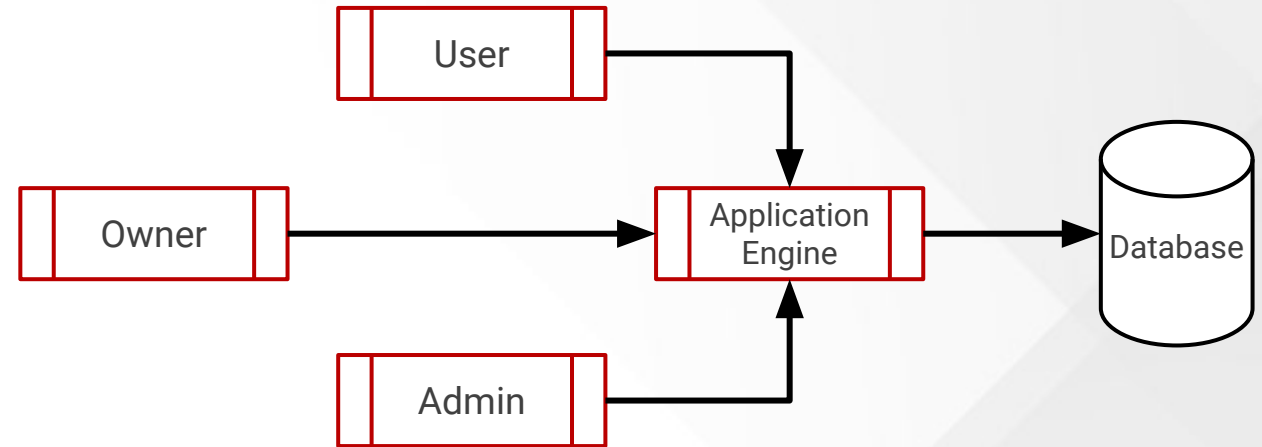

Design

System Design

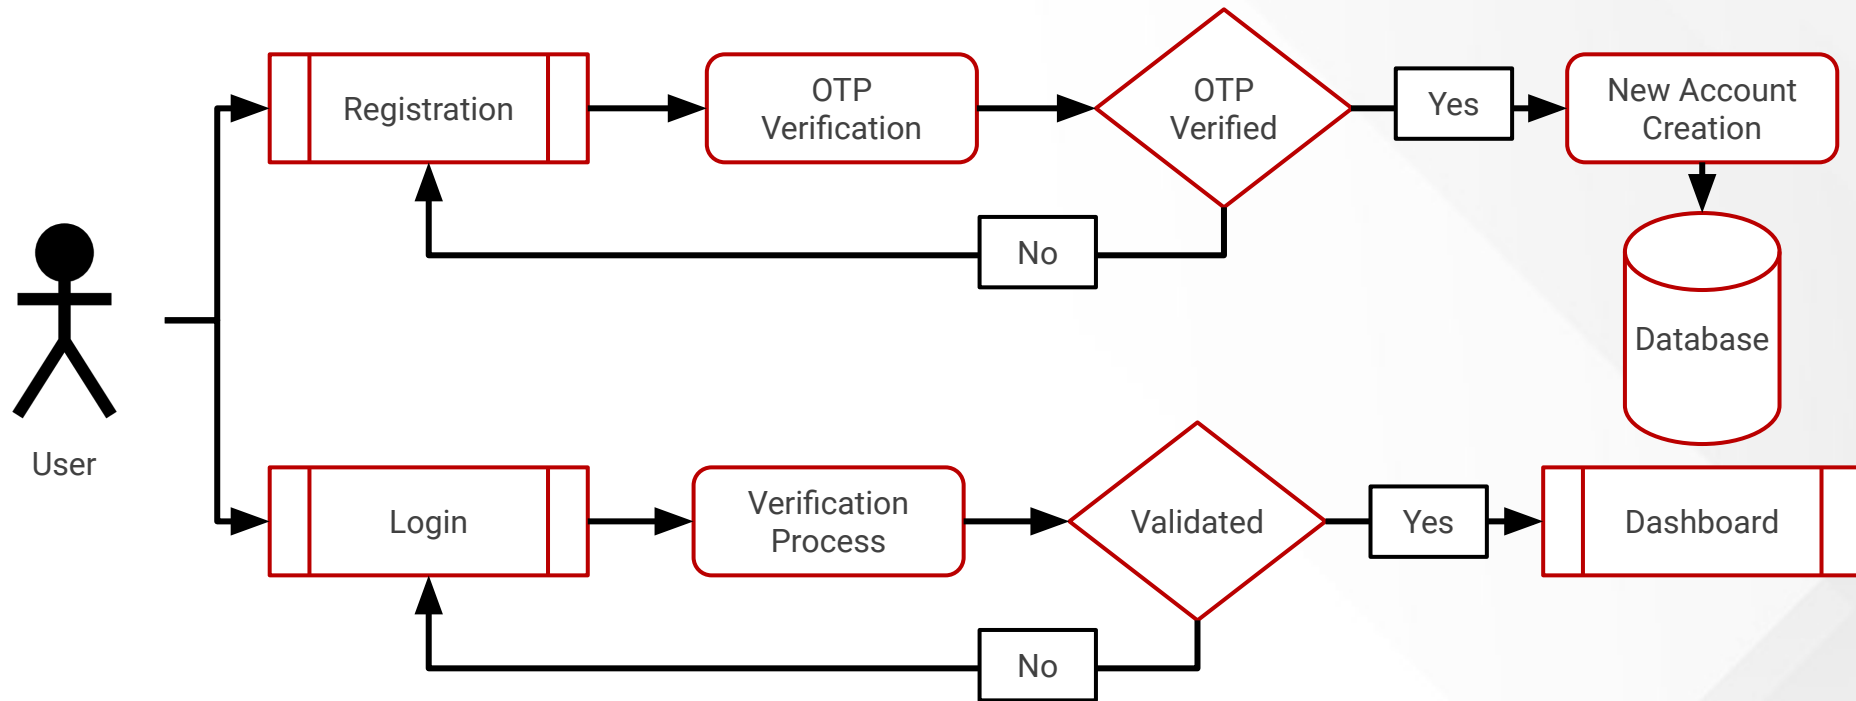

Note: The diagram shown in the image is just for the reference and is not a complete diagram of the application.

Draw.io is used for creating this diagram

Design

User flow Diagram

Note: The diagram shown in the image is just for the reference and is not a complete diagram of the application.

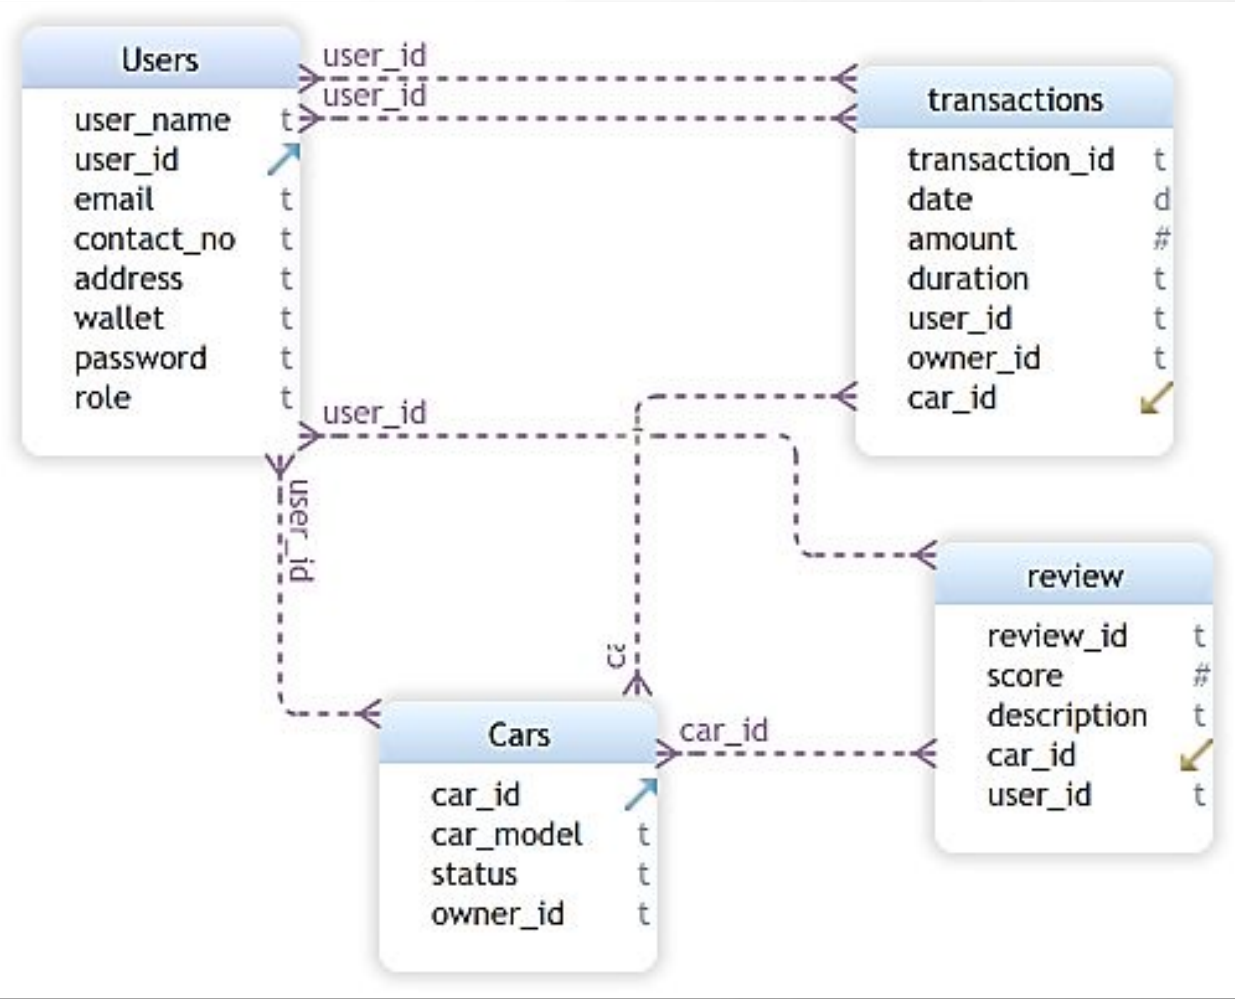

Draw.io is used for creating this diagram

Design

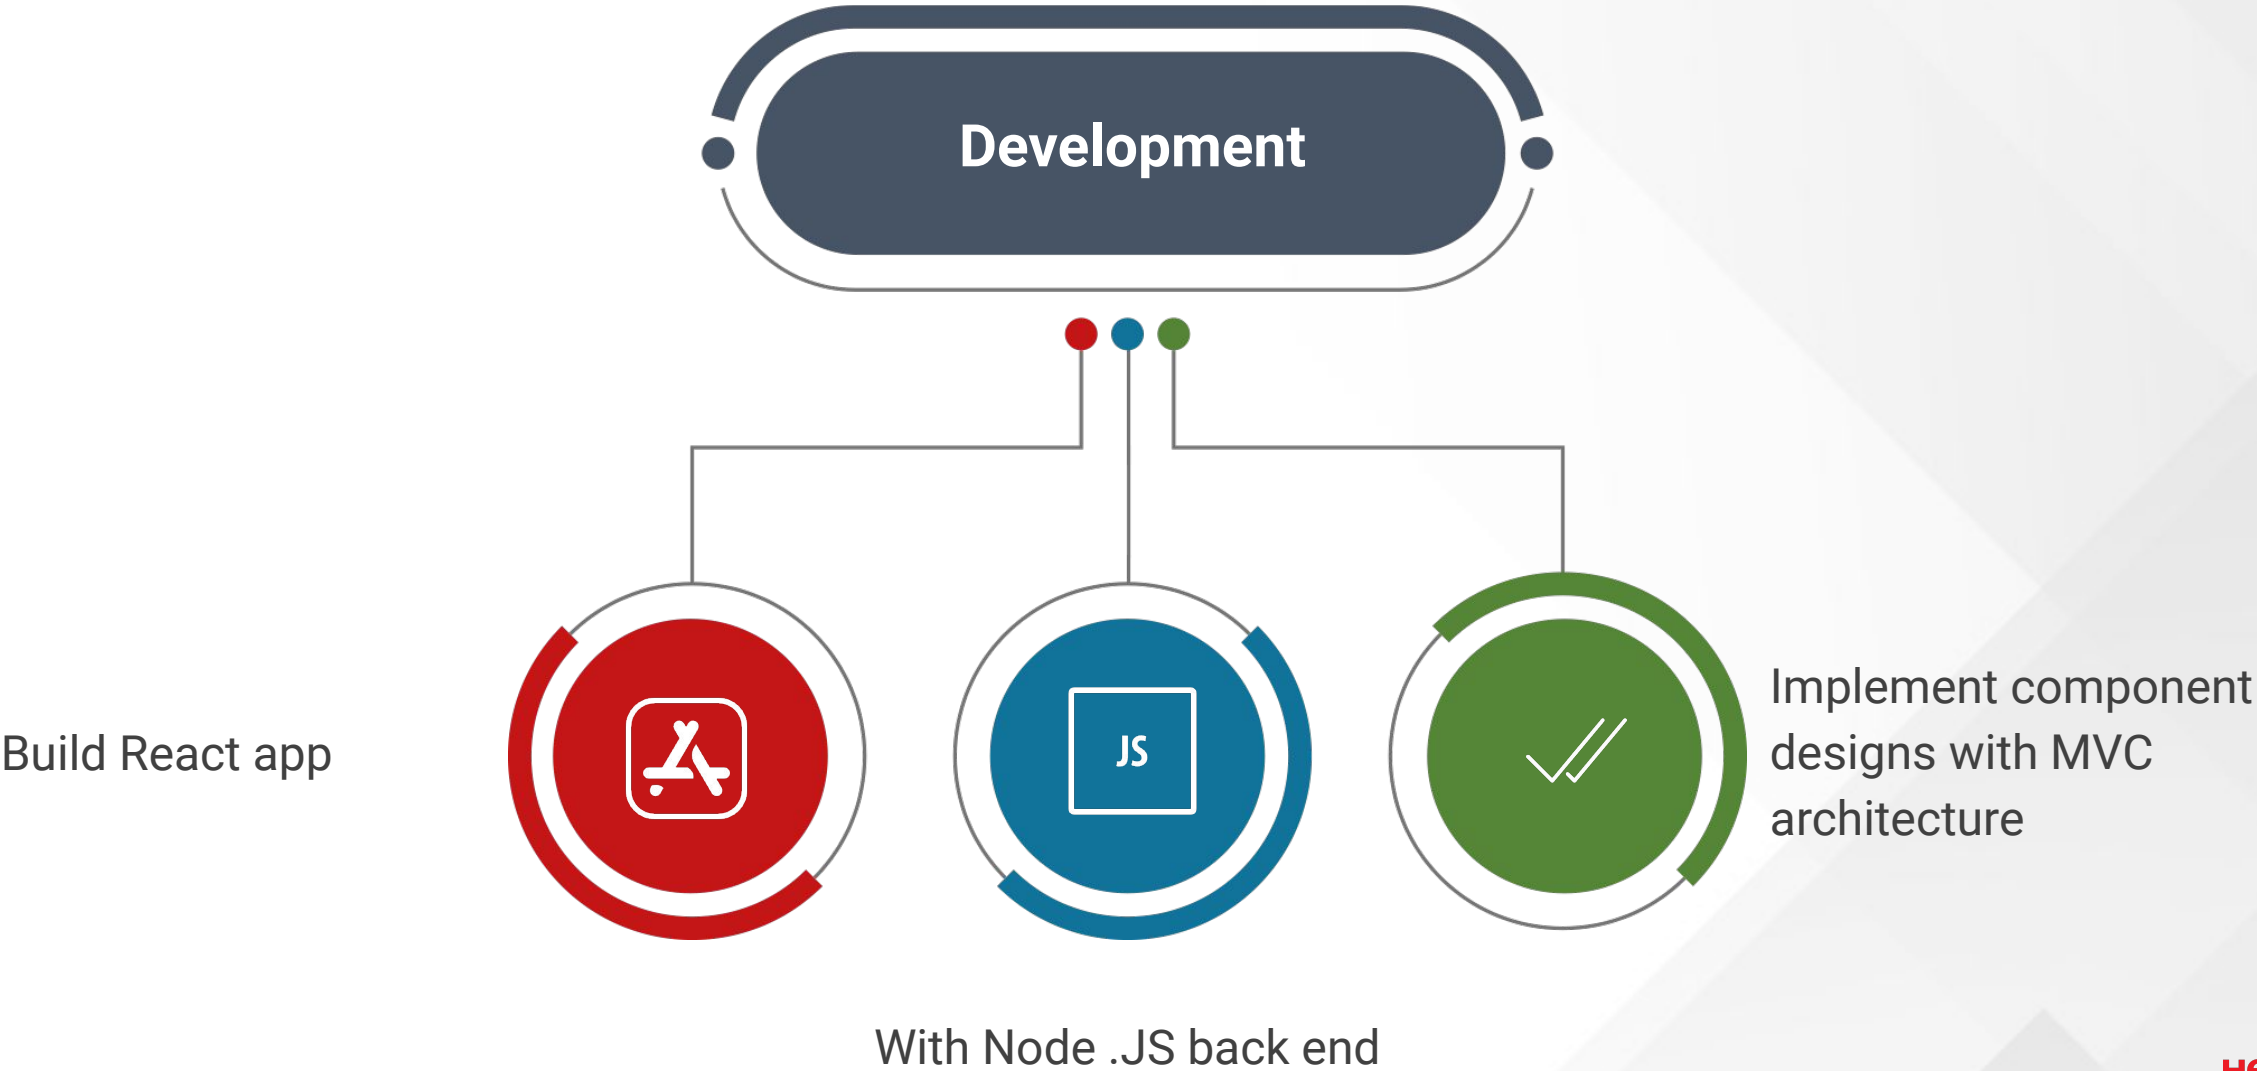

Database Design

Note: The diagram shown in the image is just for the reference and is not a complete diagram of the application.

Draw.io is used for creating this diagram

Development

Development

Technology used:

Front End:

- HTML
- CSS
- JS
- React

Back End:

- Node
- Express
- Mongoose

Database:

- MongoDB

Development

HTML

HTML

Commonly used **tags** such as
<form>, <div>, <p>
etc

CSS

CSS

Commonly used
CSS **properties** such
as 'color',
'background-color',
'position', 'display'
etc

JS

JS

- Fetch API
- DOM **manipulation**
- Asynchronous javascript

Development

React

- Components
- Hooks
- State manipulation
- Component lifecycle methods

Node

- Express framework
- middlewares
- Body-parser
- http module
- mongoose

Testing

Test Plan

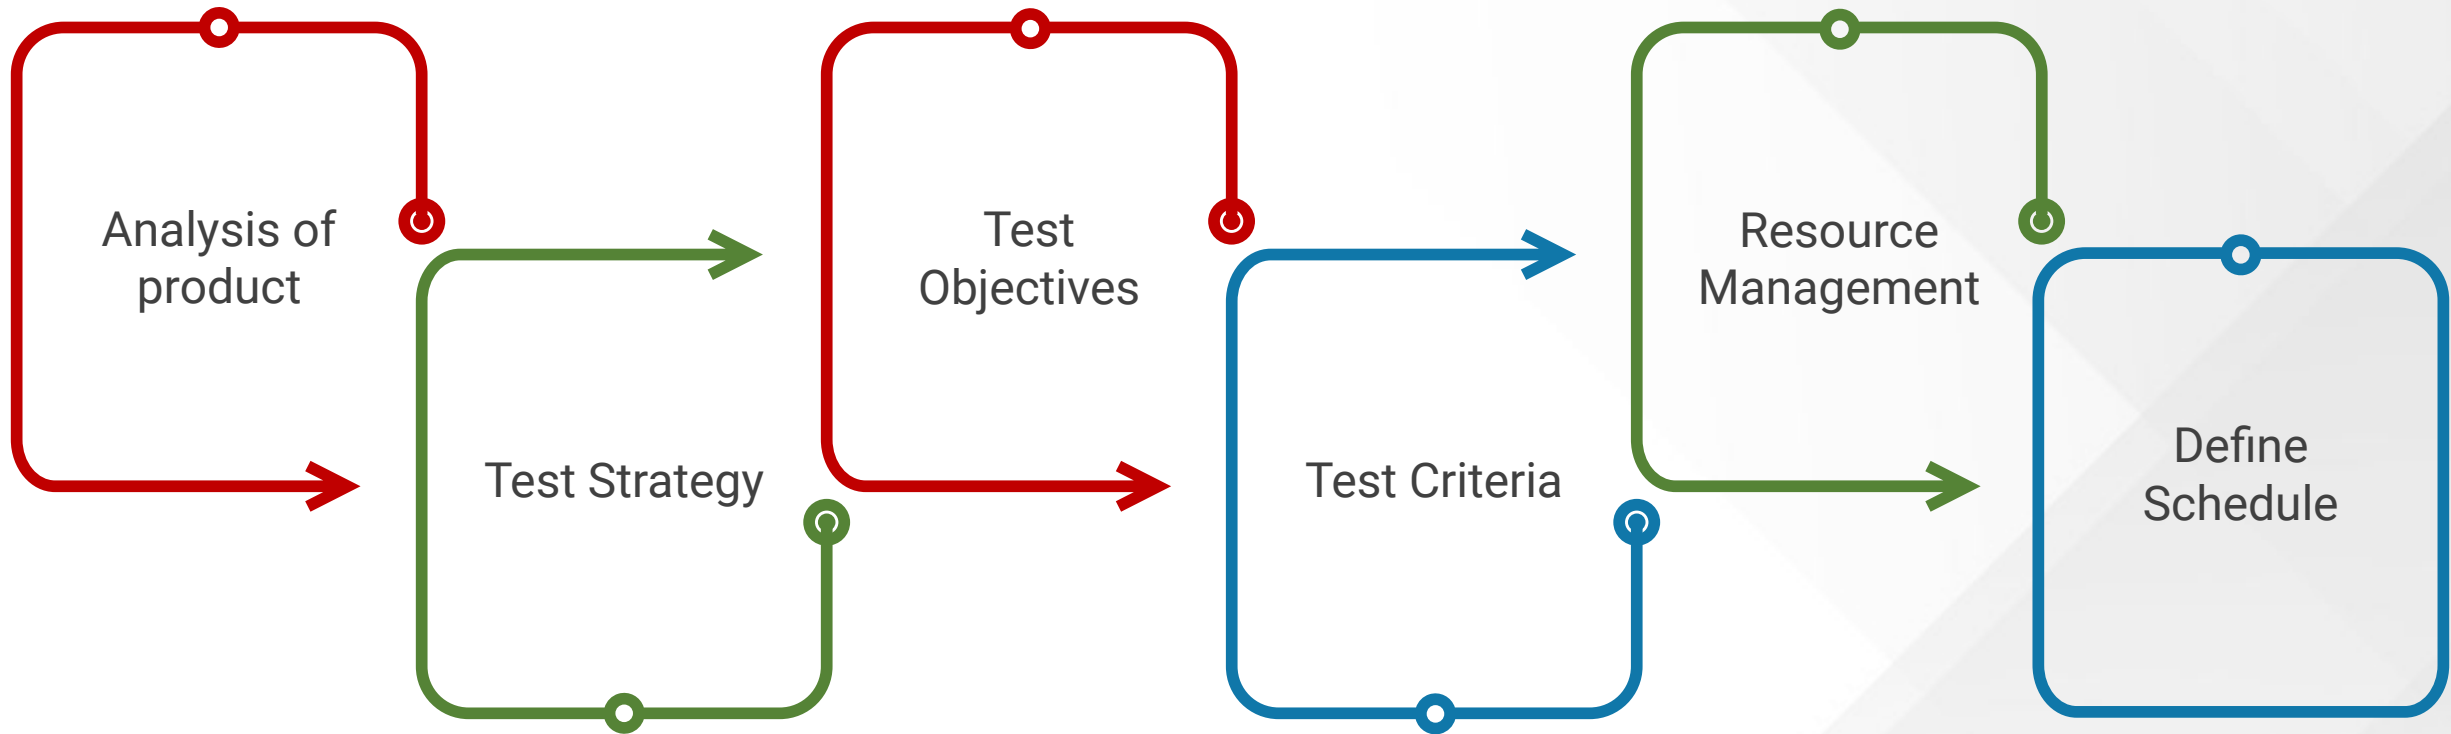

- Testing is an **essential part** of every development process
- Test plan is a document that **contains**
 - Test strategy
 - Schedule
 - Test objectives
 - Deadlines

Testing

Creating test plan document

During the creation of test plan, following elements should be defined:

Testing

Manual Testing

- Test cases are developed by the **developer**
- Automation tools are **not used**

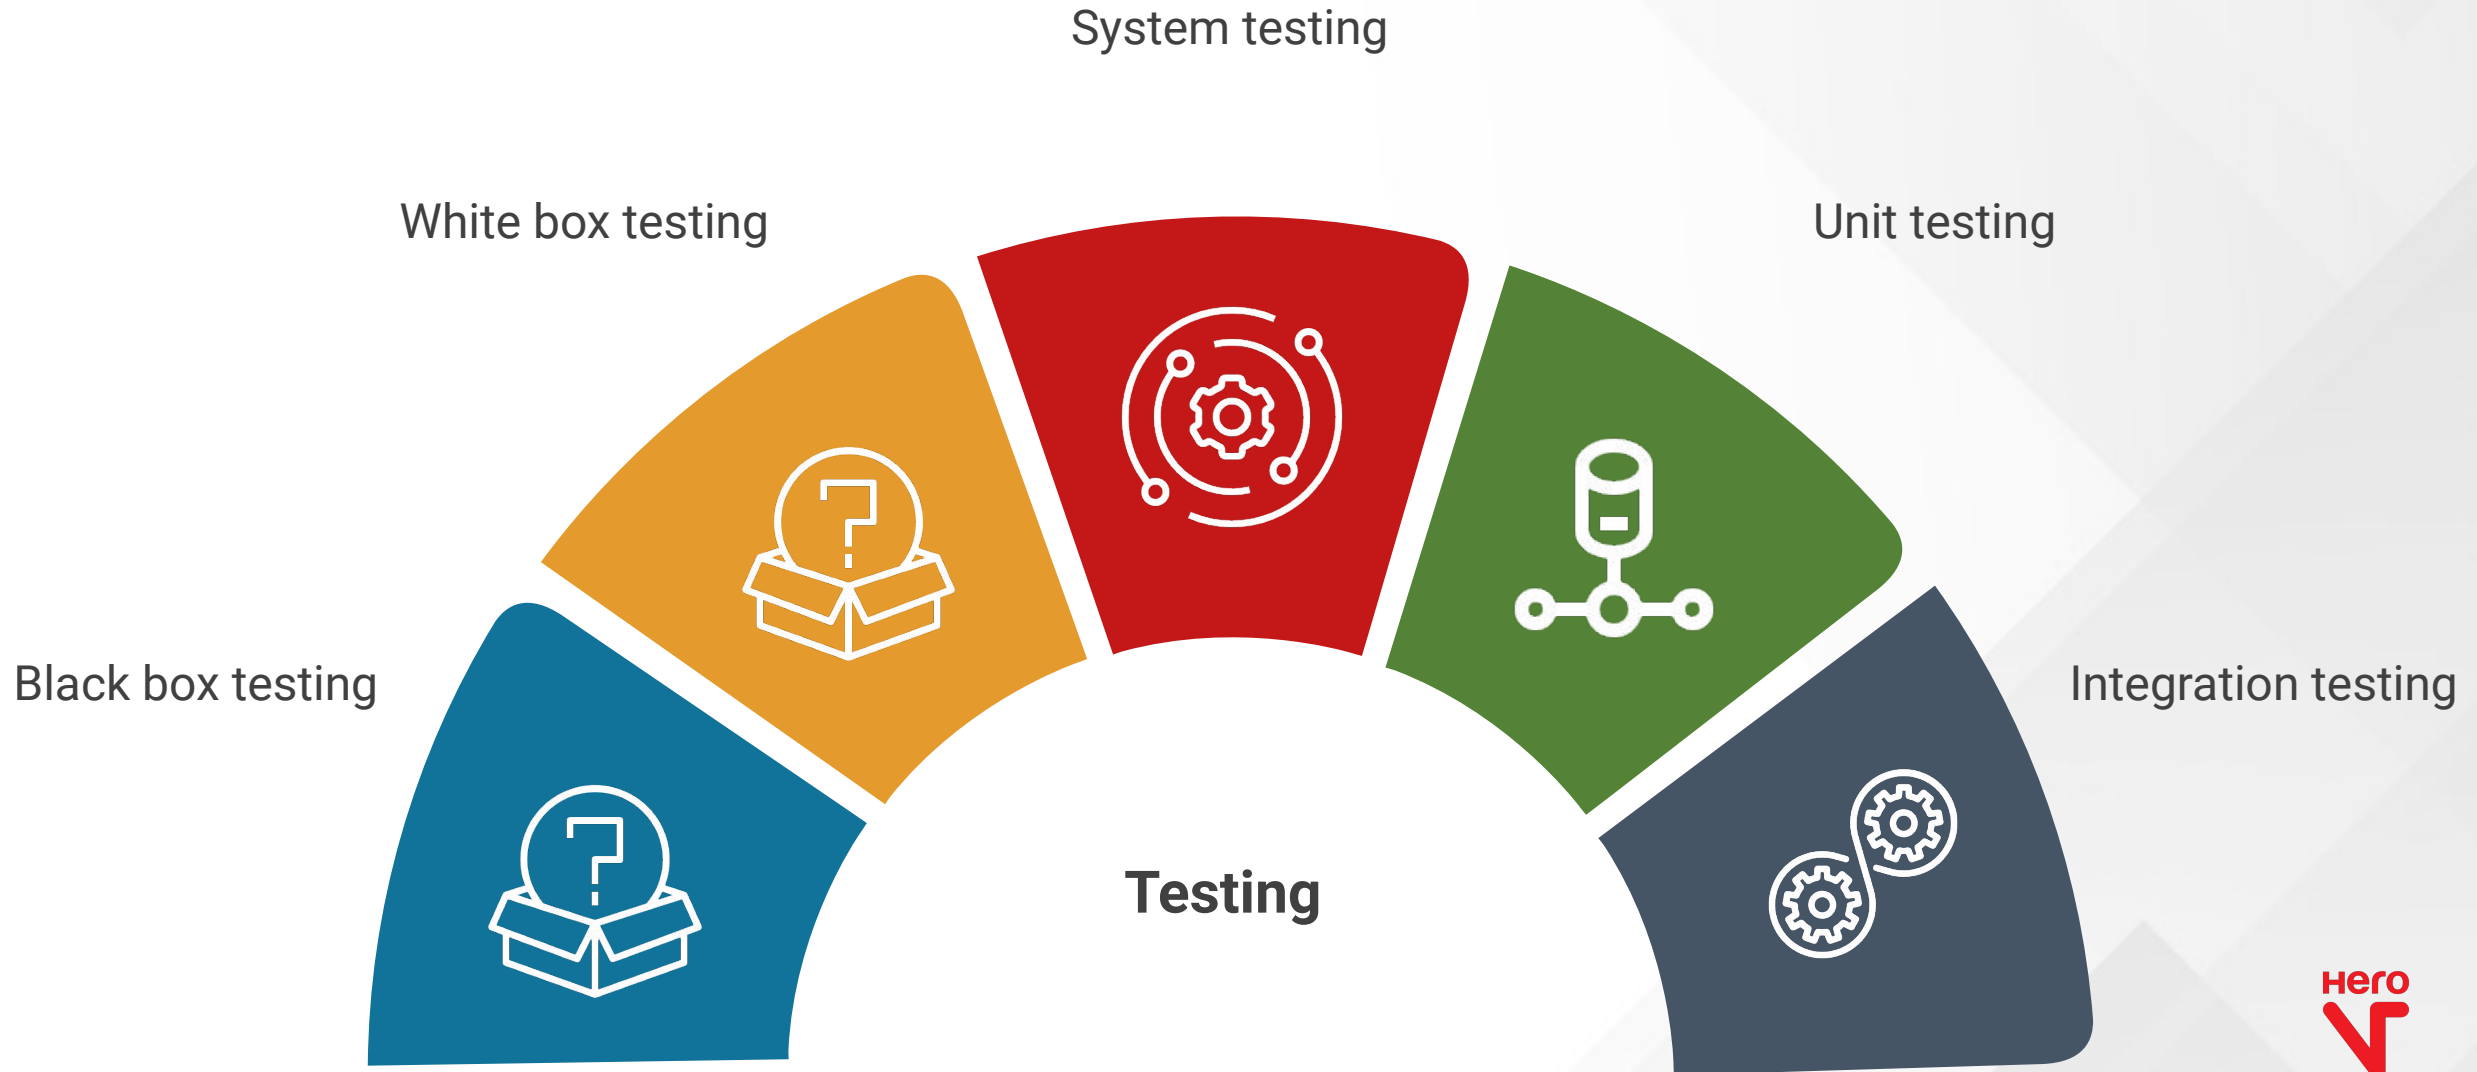

Goals

- **Find** existing bugs
- Ensure application is **error free**
- Application **meets the specified requirements**

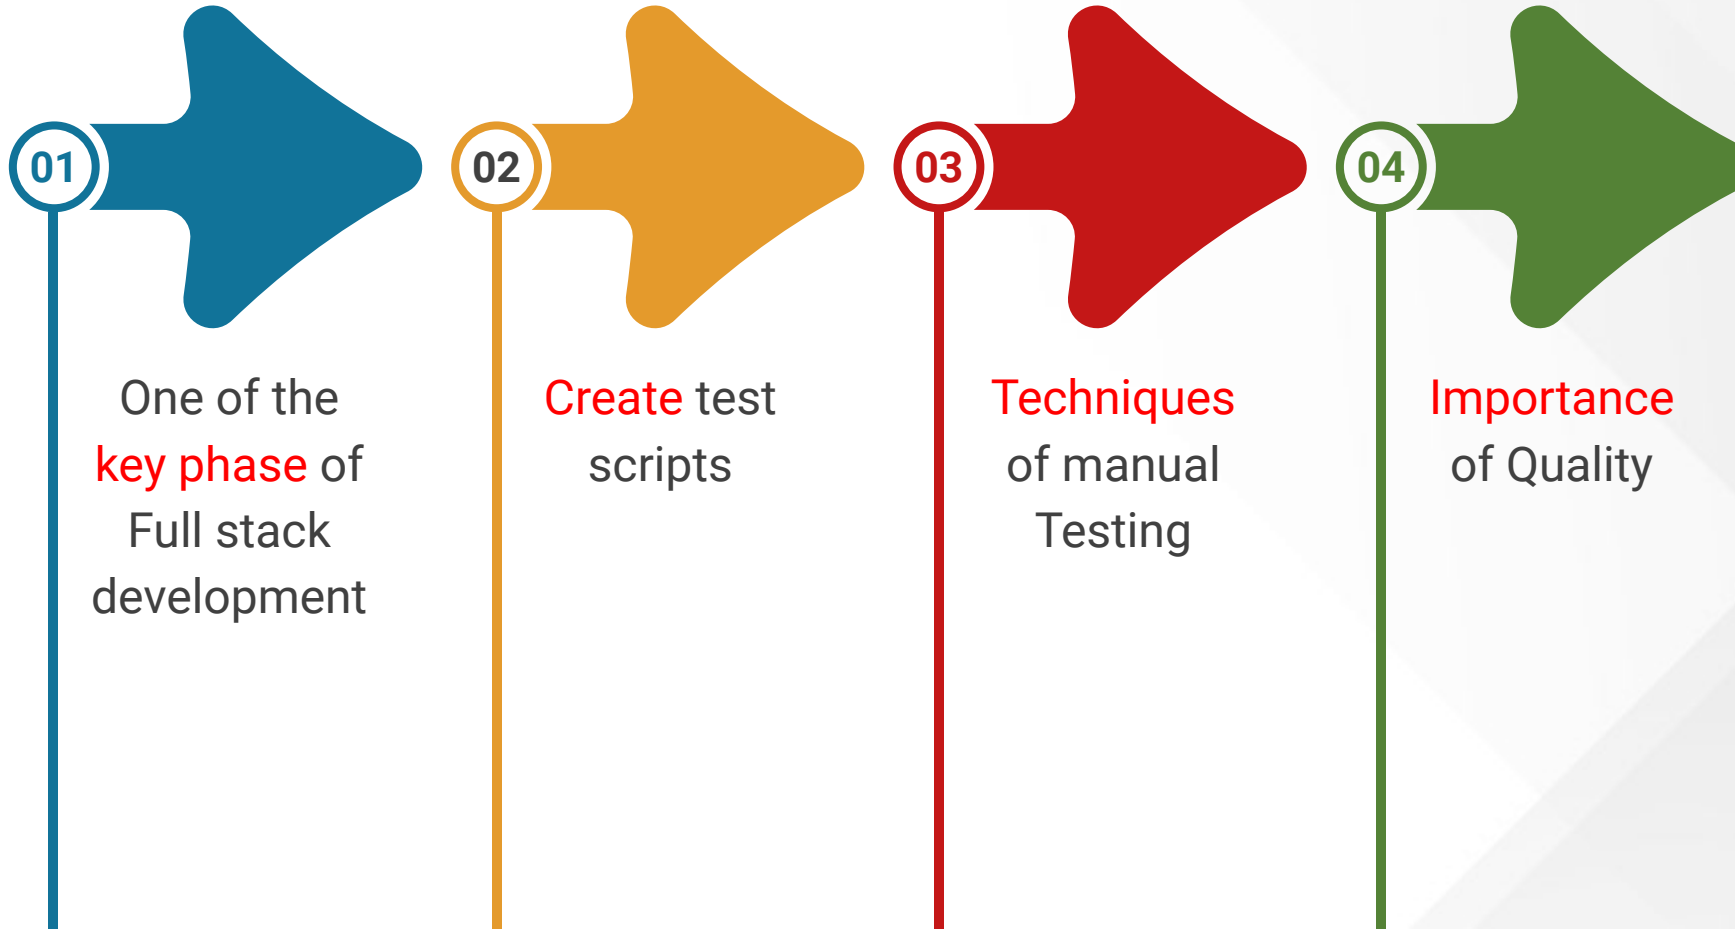

Testing

Manual Testing Types

UNIT Testing

Deployment

- Deployment is **necessary** in cloud.
- We will deploy in local for now as part of this project.

Thank You!
